

# Incident Response Planning Services

Helping businesses create rapid, cost-effective, and reputation-saving responses to active cyber threats

## Service Overview

If your business falls victim to a cyberattack, rapid and effective responses make all the difference. CloudGuard's service helps businesses of all sizes create tailored incident response (IR) plans. These plans aim to contain threats, minimise downtime, and limit operational and financial losses. Trust in us to help create your incident responses and mitigate the risks of cyber threats effectively.

## Capabilities

We work with you to create incident response plans that are designed to address your organisation's unique risks. Our team conducts a thorough assessment of any existing plans, identifying vulnerabilities and implementing necessary amendments. We then hold interactive tabletop simulations, providing real-world scenarios to actively test the performance of your incident response plan and ensure readiness in the face of potential threats.

## Benefits

79% of businesses have experienced a cybersecurity incident in the past 12 months – it's not a matter of "if" but "when." That means having a well-defined incident response plan is essential for your business. CloudGuard's Incident Response Planning Services help your business to:

-  Enhance readiness for cyber threats, minimising damage
-  Act swiftly, reducing impact and accelerating recovery
-  Provide staff with training, boosting confidence
-  Mitigate financial losses, safeguarding your bottom line
-  Preserve reputation, maintaining trust with stakeholders

## Our Incident Response Workshops

---

Here are CloudGuard's incident response workshops, designed to improve your organisation's cybersecurity resilience. Led by expert consultants, these interactive sessions cover essential aspects of Incident Response Planning from crafting tailored IR templates to immersive tabletop simulations. Each workshop equips your team with vital skills to anticipate, detect, and respond to cyber threats effectively.

The following can be booked as individual workshops or as a complete 4-day workshop depending on your current incident response readiness.

### IR Plan Creation - 1-Day Session

CloudGuard's IR leaders start with a 1-day collaborative session to develop a customised incident response template around your organisation's unique needs and challenges. Drawing upon their expertise, they guide you through the process, ensuring that the resulting plan aligns closely with your operational requirements and risk profile.

### IR Plan Review and Amendment - 2-Day Session

Over a 2-day period, CloudGuard's IR leaders assess your current incident response plans. They conduct a thorough review, taking into account your business-specific risks and processes. Based on their findings, they suggest amendments and updates to enhance the plans' effectiveness. The revised incident response template provided is a comprehensive blueprint designed to strengthen your organisation's resilience against evolving cyber threats.

### Table-top Simulations - 1-Day Session

Engage in a dynamic 1-day session led by CloudGuard's IR leaders, where your team immerses in simulated cyber incident scenarios. Through active participation, you gain valuable insights into your organisation's preparedness and response capabilities. Post-simulation, CloudGuard provides a detailed analysis, outlining strengths, weaknesses, and actionable recommendations to improve your Incident Response strategy.

## About CloudGuard®

---

CloudGuard is a leading Managed Security Services Provider (MSSP), offering a range of services to protect organisations against evolving cyber threats. With a focus on proactive threat detection, automated response, and responsive support, CloudGuard helps businesses to navigate the complexities of the digital landscape securely.
